

# ProGuard Chlorine Shut Off ELECTRIC

Chlorine gas metering - now even safer!

**ProMinent®**

Automatic closure of chlorine gas valves in seconds The DULCO® Vaq emergency shut-off system for chlorine gas, coupled with a chlorine gas detector, ensures the automatic and immediate closure of the chlorine gas source in the event of a leak.

The actuator sits directly on the chlorine gas valve of each storage tank and is controlled by a control unit. This transmits the signal to close as soon as the chlorine gas detector detects a leak. The emergency shut-off system then closes the storage tanks within a few seconds. The emergency shut-off system can also be manually triggered by an emergency stop switch fitted outside the storage room. The operator must manually re-open the chlorine gas valves after cordoning off the surroundings and rectifying a possible leak.

The emergency shut-off system is protected against power failure by an uninterrupted power supply (UPS).

- Simple assembly and dismantling without the need for tools
- Chlorine gas systems also available for retrofitting
- Suitable for almost all types of valve (chlorine gas cylinders and drums)
- Reliably closes in under 4 seconds
- Electrically operated and secured by battery (UPS via control unit)
- Adjustable torque for secure closure
- Designed to meet the highest quality standards

## Your benefits

- Electrically operated installation
- Uninterrupted power supply (UPS)
- Reliably closes in under 4 seconds
- Suitable for chlorine gas cylinders and drums
- Assembly and dismantling without the need for tools
- Adjustable torque for secure closure

## Field of application

- Potable water
- Swimming pool water
- Waste water
- Cooling water
